## Editorial Foreword

---

At the dawn of a new decade 2020, 5G Networks is about to take over the world stage. 5G will pave the way for innovative technologies. Thus, this is the right time to start evaluating the current global challenges experienced by our society and look ahead for the technologies and future uses cases needed to tackle them.

The motivation for the next issue of the ICT Journal is based on the United Nations (UN) policy, *Connected 2030 Agenda for Global Telecommunication/ICT Development*. In this document, U.N. world leaders recognize that "... the spread of information and communications technology and global interconnectedness has great potential to accelerate human progress, to bridge the digital divide and to develop knowledge societies ...". Therefore, this new edition of the ICT Journal shed some light on the innovation technologies that are ready for this present future.
